

ORIGINAL TOWN RECONNAISSANCE SURVEY # 1

PROJECT REPORT

Prepared for the City of Topeka by
Landmark Preservation Associates

August 2003

Project Overview and Methodology Discussion

In 2002 the City of Topeka (the City) was awarded a survey and planning grant from the Kansas State Historical Society (the KSHS) to undertake a reconnaissance-level survey of a portion of the Original Town area in Topeka, Kansas (Fig. 1). Landmark Preservation Associates, a preservation consulting firm based in Lexington, Virginia, provided the City products and services towards the completion of the survey. The project was administered by the Topeka-Shawnee County Metropolitan Planning Department, represented by James Gittemeier, Planner I, and Dan Warner, Planner II, and conducted by J. Daniel Pezzoni of Landmark Preservation Associates.

The project area is defined by NW Crane Street on the north, SE Qunicy Street on the east, SW 6th Avenue on the south, and Topeka Boulevard on the west. The survey identified a range of historic resources including representatives of the Greek Revival, Italianate, Gothic Revival, Victorian, Queen Anne, Romanesque, Classical Revival, Colonial Revival, Tudor Revival, Craftsman, Mission, Prairie, Art Deco, and Moderne styles. The project area is functionally mixed, with houses and commercial buildings representing the majority of historic resources, but also includes government buildings, industrial buildings, a church, a church school, and a building thought to have been used as a community hospital. The project area includes a number of modern (post-1953) resources.

Fieldwork was conducted in June 2003 and resulted in the survey of 226 primary resources within the project area and the partial completion of 226 Kansas Historic Resources Inventory Reconnaissance Forms. In addition, secondary resources such as garages and sheds that were visible from public thoroughfares were recorded. The information gathered on primary and secondary resources included architectural style, basic building form, height, roof material and type, wall material and type, foundation material, chimney/flue material (if applicable), front porch characteristics (if applicable), and the noting of features such as dormers, wings, other porches, notable decorative details, and so forth. During the June 2003 survey phase a presentation was made to the Topeka-Shawnee County Landmarks Commission, and the City and the consultant accompanied KSHS Architectural Historian Martha Hagedorn-Krass in a windshield survey of the project area to assess its potential for National Register of Historic Places historic district designation.

Recommendations

The KSHS recommends the Multiple Property Submission approach to listing eligible individual properties in the project area in the National Register of Historic Places. This approach entails the preparation of a general historic context or contexts that would facilitate the listing of individual properties that relate to the context(s). The KSHS considers a number of areas within the project area to have sufficient age, architectural significance, and integrity to qualify as small

historic districts. These areas, five individually designated National Register of Historic Places properties, and one property determined eligible for the National Register (DOE) are shown in Fig. 2. The KSHS regards resources with modern siding as noncontributing to the historic character of districts. Therefore, areas within the project area with a preponderance of historic (pre-1954) resources with modern siding are not regarded by the KSHS as having potential for historic district designation. However, the National Register permits the classification of historic resources with modern siding as contributing to historic districts, and application of this more inclusive approach may result in the identification of additional areas with the potential for designation. Recommendations for potentially eligible individual properties were not a product of this project; however, it is the opinion of the consultant that there may be many such properties in the project area.

National Register listing would confer a number of benefits on property owners and the City. Foremost among these is official recognition of the architectural and historical significance of a listed property, recognition that can foster public and private-sector appreciation for and protection of historic properties. Certain types of construction and remodeling work on or near a National Register-listed property would be reviewed for architectural appropriateness, as provided for by Kansas state law. The effects of federal undertakings on National Register-listed or eligible resources are reviewed by the KSHS and mitigation of adverse affects are considered. The National Register process is an excellent vehicle for documenting the history and architecture of a given area and the individual buildings within the district.

Also beneficial are federal and state tax credits that are available to property owners who undertake certified rehabilitations of contributing buildings within a National Register historic district or properties that are individually listed in the register. The federal rehabilitation tax credit is available for income-producing properties and amounts to 20% of certified rehabilitation expenses. The 25% state credit is available for both income and non-income producing properties. Rehabilitation work must conform to the Secretary of the Interior's Standards for Rehabilitation and must be certified by the KSHS (for the state credit) and the National Park Service (for the federal credit). For additional information on these programs contact the KSHS at (785) 272-8681. Note: participation in the rehabilitation tax credit programs is voluntary. In addition to the 20% and 25% credits there is a 10% credit that is available only for rehabilitation of certain non-historic commercial buildings (noncontributing buildings in listed National Register historic districts) constructed before 1936.

A number of sources may be helpful in more accurately determining construction dates for surveyed properties in the project area. Shawnee County lists construction dates for many if not all of the project area's primary resources on its website, www.co.shawnee.ks.us. Sanborn Map Company insurance maps would provide information on the existence of primary and secondary resources for a given year as well as other helpful information. City directories; historic maps, photographs, and other graphic sources; the reminiscences of former and present residents;

Reconnaissance Survey of North Topeka (No. 1) Project Report

secondary sources and publications such as *Remembrances In Wood, Brick, and Stone*; and other sources may be helpful in providing general and property-specific information on the project area.

List of Surveyed Properties

Address discrepancies are coded as follows. If the address number posted on the building differs from the address number in the City database, the building address number follows the database address in parentheses. If the entire street address is different, the street address as it appears on the building follows the database street address in parentheses. If the street address as posted on the building does not appear in the City database, this is noted by (ND) for "not in database."

WARD-MEADE RECONNAISSANCE SURVEY # 1

PROJECT REPORT

Prepared for the City of Topeka by
Landmark Preservation Associates

August 2003

Project Overview and Methodology Discussion

In 2002 the City of Topeka (the City) was awarded a survey and planning grant from the Kansas State Historical Society (the KSHS) to undertake a reconnaissance-level survey of a portion of the Ward-Meade area in Topeka, Kansas (Fig. 1). Landmark Preservation Associates (the consultant), a preservation consulting firm based in Lexington, Virginia, provided the City products and services towards the completion of the survey. The project was administered by the Topeka-Shawnee County Metropolitan Planning Department, represented by James Gittemeier, Planner I, and Dan Warner, Planner II, and conducted by J. Daniel Pezzoni of Landmark Preservation Associates.

The project area is defined by Interstate 70 on the north, Topeka Boulevard on the east, SW 5th Street on the south, and Quinton Avenue and the 400 block of SW Buchanan Street on the west. The consultant surveyed and prepared Continuation Sheets for the portion of the project area north of SW 4th Street except for the east sides of the 200 and 300 blocks of SW Polk Street; the remainder of the area was surveyed by the City. The survey identified a range of historic resources including representatives of the Italianate, Victorian, Queen Anne, Classical Revival, and Craftsman styles (influence from the Gothic Revival, Mission, Colonial Revival, Spanish Colonial Revival, and Tudor Revival styles was also documented). The majority of principal resources were houses, but a church, a school, and various commercial building types were also documented. Many houses were accompanied by secondary resources such as garages, stables or carriage houses, and sheds. The project area also included a number of modern (post-1953) resources.

Fieldwork by the consultant was conducted in June 2003 and resulted in the survey of 457 primary resources within the project area and the partial completion of 457 Kansas Historic Resources Inventory Reconnaissance Forms and Continuation Sheets. In addition, secondary resources that were visible from public thoroughfares were recorded. The information gathered on primary and secondary resources included architectural style, basic building form, height, roof material and type, wall material and type, foundation material, chimney/flue material (if applicable), front porch characteristics (if applicable), and the noting of features such as dormers, wings, other porches, notable decorative details, and so forth. During the June 2003 survey phase a presentation was made to the Topeka-Shawnee County Landmarks Commission, and the City and the consultant accompanied KSHS Architectural Historian Martha Hagedorn-Krass in a windshield survey of the project area to assess its potential for National Register of Historic Places historic district designation.

Recommendations

The KSHS recommends the Multiple Property Submission approach to listing eligible individual properties in the project area in the National Register of Historic Places. This approach entails the preparation of a general historic context or contexts that would facilitate the listing of individual properties that relate to the context(s). The KSHS considers a number of areas within the project area to have sufficient age, architectural significance, and integrity to qualify as components of a potential historic district or districts. Other areas that the KSHS considers to have lesser integrity may qualify pending further investigation. The KSHS regards resources with modern siding as noncontributing to the historic character of districts. Therefore, areas within the project area with a preponderance of historic (pre-1954) resources with modern siding are not regarded by the KSHS as potential components of a historic district or districts. The areas considered to qualify by the KSHS, two individually designated National Register of Historic Places properties, and one National Historic Landmark property are shown in Fig. 2.¹

The consultant's district recommendations appear in Fig. 3. The consultant considers the majority of the project area to have potential as a National Register historic district owing to the age and aggregate architectural significance of the resources and for their high degree of integrity (the National Register permits the classification of historic resources with modern siding as contributing). The consultant recommends survey of the blocks between SW 5th Street (the south boundary of the project area) and SW 6th Avenue to determine if these areas would have potential for inclusion in a Ward-Meade Historic District. The resources in this area appear to be similar in age, architectural character, and level of integrity to those within the project area. Also, the 6th Avenue corridor would make a logical boundary zone for a potential historic district owing to its different character as a four-lane arterial thoroughfare lined with a mix of historic and modern, residential and strip-type commercial resources. Other boundaries may be suggested by an examination of the Ward-Meade neighborhood's historical development. Recommendations for potentially eligible individual properties were not a product of this project; however, it is the opinion of the consultant that such properties exist in the project area.

National Register listing would confer a number of benefits on property owners and to the City. Foremost among these is official recognition of the architectural and historical significance of a listed property, recognition that can foster public and private-sector appreciation for and protection of historic properties. Certain types of construction and remodeling work on or near a National Register-listed property would be reviewed for architectural appropriateness, as provided for by Kansas state law. The effects of federal undertakings on National Register-listed or eligible resources are reviewed by the KSHS and mitigation of adverse affects are considered.

¹ The majority of these areas were identified by KSHS staff in June 2003; a few of the areas were added to Fig. 1 based on application of KSHS standards.

Reconnaissance Survey of North Topeka (No. 1) Project Report

The National Register process is an excellent vehicle for documenting the history and architecture of a given area and the individual buildings within the district.

Also beneficial are federal and state tax credits that are available to property owners who undertake certified rehabilitations of contributing buildings within a National Register historic district or properties that are individually listed in the register. The federal rehabilitation tax credit is available for income-producing properties and amounts to 20% of certified rehabilitation expenses. The 25% state credit is available for both income and non-income producing properties. Rehabilitation work must conform to the Secretary of the Interior's Standards for Rehabilitation and must be certified by the KSHS (for the state credit) and the National Park Service (for the federal credit). For additional information on these programs contact the KSHS at (785) 272-8681. Note: participation in the rehabilitation tax credit programs is voluntary. In addition to the 20% and 25% credits there is a 10% credit that is available only for rehabilitation of certain non-historic commercial buildings (noncontributing buildings in listed National Register historic districts) constructed before 1936.

A number of sources may be helpful in more accurately determining construction dates for surveyed properties in the project area. Shawnee County lists construction dates for many if not all of the project area's primary resources on its website, www.co.shawnee.ks.us. Sanborn Map Company insurance maps would provide information on the existence of primary and secondary resources for a given year as well as other helpful information. City directories; historic maps, photographs, and other graphic sources; the reminiscences of former and present residents; secondary sources and publications such as *Remembrances In Wood, Brick, and Stone*; and other sources may be helpful in providing general and property-specific information on the project area.

Fig. 2. Ward-Meade Reconnaissance Survey #1 Project Area. Areas considered by the KSHS to have sufficient integrity for National Register of Historic Places district designation demarcated by heavy solid lines. Areas considered by the KSHS to meet National Register requirements pending further investigation demarcated by dashed lines. Some areas have not been assessed by the KSHS. Presently listed National Register and National Historic Landmark properties indicated.
